

DRINKING WATER QUALITY

In the United States, drinking water is monitored and public safety is ensured through the Safe Drinking Water Act. In an effort to tailor that to aircrafts, and their unique characteristics, the EPA proposed the **Aircraft Drinking Water Rule (ADWR)**. With sufficient O&M plans in place, and scheduled water testing, airlines will be able to ensure safe drinking water for their passengers and crews.

As a certified independent laboratory, **ESS** provides accurate results in a timely manner. For more than 30 years, we have specialized in water and wastewater testing, and we are available to assist with your complete water monitoring program

With facilities in **Culpeper, VA** and **Bedford, VA**, ESS is within driving distance of:

Dulles, Reagan, BWI, Richmond, Charlottesville, Lynchburg, and Roanoke Airports.

Additionally, shipments from the NC area arrive the next day with ground shipments, saving money while staying within holding time requirements.

Testing Details:

- Colilert Testing Method (EPA Approved)
- 18 or 24 hr Coliform presence/absence test
- Samples must be received in laboratory within 30 hours of collection time
- Containers provided upon request
